## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paraschae further in view of Koblish et al. In figure 3 Paraschae discloses first and second grasping jaws that both include a conductive ablation member (27) and a receding clamping surface (26) as claimed. Paraschae teaches all of the limitations of the claims except a thermocouple being disposed on one of the jaws. Koblish et al. disclose a similar device and teach that it is old and well known in the art to provide a thermocouple on the clamping surface of the device (col. 14 lines 5-19) to provide a means of controlling the energy applied to the device. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a thermocouple on the clamping surface of the device to provide a means of controlling the energy applied to the device.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paraschae and Koblish et al. '700 further in view of Imran '860.

Art Unit: 3739

Paraschae and Koblish et al. teach all of the limitations of the claims except the electrodes comprising gold plated copper and the length and width of the electrodes.

Imran discloses an ablation device and teaches that it is old and well known in the art to use gold plated copper as an electrode material. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to select gold plated copper as the electrode material for the Paraschae device, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice, particularly in view of the teaching of Imran.

Furthermore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to form the electrode according to the dimensions as claimed, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum dimensions involves only routine skill in the art.

### ***Allowable Subject Matter***

Claims 1-3 are allowed.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

Art Unit: 3739

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
